Description of changes since the last course and decisions already made since last course date (if any was made)

For the first time, the course was in English and for the first time it was distance learning (zoom).

The strengths of the course's according to the students
(summary based on quantitative results, text responses from the survey and any other evaluation during the course)

Commitment on my part and the examination form

The weaknesses of the course according to the students
(summary based on quantitative results, text responses from the survey and any other evaluation during the course)

That the course was in English and that there was a partial lack of structure
The teachers' analysis of the course's implementation and results

A good result but unsure of the fact that an A examination was set up at Athena (without my knowledge), I suspect that many took the structure from this and made similar reports, hence the whole pedagogical point of the course was missed, that the student should solve the task themselves. Therefore, I have to think about changing the whole structure of the course, especially the exam.

Conclusions and suggestions for possible changes in order to develop the course and any decisions already made to develop the course before future course dates.

Should partly change the structure with finished recordings and targeted question and answer sessions, perhaps dividing Swedish and English-speaking students.

Other comments

Nice and curious students.
