Number of respondents
39

Number of answers
24

Compilation
Compilation_SO7032_SO1FU15_VT21.pdf

Description of changes since the last course and decisions already made since last course date (if any was made)

It was given online instead of in-class.

The strengths of the course's according to the students
(summary based on quantitative results, text responses from the survey and any other evaluation during the course)

Relevant course content, students learn new things, good teaching and home assignments with detailed feedback.

The weaknesses of the course according to the students
(summary based on quantitative results, text responses from the survey and any other evaluation during the course)

More clarity; maybe more information about how to evaluate articles; first part of course slower than later part.
The teachers' analysis of the course's implementation and results

Despite the challenging conditions for an online course in regression most students were satisfied with the course implementation and results.

Conclusions and suggestions for possible changes in order to develop the course and any decisions already made to develop the course before future course dates.

The course will return to in class teaching. More examples of linear regression analysis (research papers) will be provided in the future.
